

SYNOPSIS

TITLE OF PRESENTATION:

Protection against the Rising Risk of a Systemic Financial Meltdown

Name of Presenter/s: Louis Boulanger

Key words:

Louis will present a paper on the systemic crisis which continues to evolve from the US credit and housing crisis to a global financial, banking and ultimately monetary crisis. He will argue that our current predicament was caused principally by the staggering increase in the global money supply over recent years and the losing credibility of central banks given the growing moral hazard perpetuated by them, especially the US Fed, since August 2007.

Louis will explain how he believes investment portfolios, typically invested only in financial assets, can actually still protect themselves from rising systemic risk.

The paper would obviously be part of an 'Investment track'.
